About Me

Computer Engineer (IPN) and Full-Stack Developer with production experience designing containerized Python microservices, serverless cloud architectures on AWS, and reactive interfaces using Vue.js (Nuxt) and React. Experienced as a Tech Lead managing end-to-end CI/CD pipelines and cross-functional teams under Agile methodologies. Specialized in building scalable, data-driven systems integrating Machine Learning and LLM-driven structured data extraction. Actively preparing AWS Certified AI Practitioner, Google Associate Cloud Engineer, and Azure Administrator credentials.

Education

BS	National Polytechnic Institute - ESIME Culhuacan , Computer Engineer	CDMX, Mexico Jan 2022 – June 2027
	- Systems Programming & Compilers: Architected a custom 8086 Assembly two-pass compiler in C#, implementing lexical, syntax, and semantic. - Advanced Algorithms & Data Structures: Built an optimized algorithm and data structure library in C++ covering trees, graphs, sorting heuristics, and manual memory management. - Software Architecture: Designed an N-tier enterprise web application applying MVC patterns, built with ASP.NET Core, React, and Microsoft SQL Server.	

Experience

Picaio , Intern Backend Developer - Jr Backend Engineer	Santa Fe, CDMX Aug 2025 – present
- Microservices & Data Reconciliation: Architected and maintained scalable backend microservices in Python, modernizing legacy data reconciliation workflows. - Engineered intelligent data extraction pipelines integrating LLMs with Machine Learning text inference, enforcing strict JSON Schema.	
Hospital Infantil Federico Gomez , TL / Fullstack developer (Community service)	Cuauhtemoc, CDMX July 2026 – Dec 2026
- Led a cross-functional technical team to develop and launch a unified corporate web platform,. - Architected and implemented end-to-end Continuous Integration and Continuous Deployment (CI/CD) pipelines.	
Reynoso Medical Clinic , Desktop application developer	Remote, CDMX Dec 2025 – Jan 2026
I created a Windows desktop application using WPF with XAML and C#. It managed patient data and the consultations they had attended.	
Huvytas E-Commerce , Fullstack Developer	Remote, CDMX July 2025 – Sept 2025
- With a development team, we created a payment page with an initial product, providing visual development, business logic, and data storage. - Develop a microservices architecture, develop frontend with Vue and backend with Python with deployments on AWS Amplify, AWS Lambda, DynamoDB and AWS Api-gateway.	

Projects

Tableau 🔗	Aug 2026
Fullstack platform for remote agile management and traceability of mandatory team member hour quotas.	
Agile Core & RBAC: Built dynamic Scrum boards, sprint metrics, and strict role-based access control (RBAC) using Node.js, React, and MongoDB.	

- DevOps Pipeline: Containerized the environment with Docker and established automated CI/CD workflows via GitHub Actions for continuous delivery.

Hermes [↗](#)

July 2026 – Aug 2026

Modular personal management ecosystem integrating Google Workspace and AI services into a private workspace.

- Fullstack Architecture & AI: Built an asynchronous architecture (FastAPI & Nuxt 3) consolidating finance dashboards, habit trackers, and Google AI integrations.
- Self-Hosted Infrastructure: Deployed on private infrastructure secured via Tailscale VPN with containerized Docker services and automated CI/CD.

Alien Gains [↗](#)

Apr 2026 – May 2026

Lightweight financial management engine designed to track cash flow, daily expenses, and debt amortization.

- Transactional Modeling: Designed relational database schemas in SQL Server and APIs in C# .NET to validate daily financial data integrity.
- Scalable Business Logic: Developed a reactive Vue.js interface and validated financial logic that was later scaled and integrated into the HERMES platform.

Tienda La Moderna [↗](#)

July 2026 – Aug 2026

Commercial inventory management platform focused on data security and strict transactional consistency.

- Database-Level Logic: Implemented complex stored procedures, triggers, and views in SQL Server to enforce automated auditing and data integrity.
- Modern Interface: Built a responsive React frontend consuming C# .NET backend endpoints for real-time stock control and sales management.

Skills

Programming Languages: Python (FastAPI, Flask), C# (.NET Core, ASP.NET), TypeScript, JavaScript (ES6+), Node.js, C/C++, SQL, Bash

Frontend Development: Vue.js, React.js, Astro, Nuxt, Bootstrap, Tailwind CSS, HTML5, CSS3, JavaScript

Backend & Architecture: Microservices, RESTful APIs, Serverless Architecture, MVC

Databases & Storage: PostgreSQL, MongoDB, Microsoft SQL Server, Amazon DynamoDB, MySQL, Redis, SQLite

Cloud & Infrastructure: AWS (Lambda, API Gateway, DynamoDB, Amplify, S3), Google Cloud Platform (GCP), Microsoft Azure, Docker, Docker Compose, NGINX, Linux

DevOps & Methodologies: Git, GitHub Actions (CI/CD Pipelines), Agile / Scrum, Kanban, Postman, Jira

Spoken Languages: Spanish (Native), English (Professional Working Proficiency / B1)

Certificates

Foundational C# with Microsoft

freeCodeCamp

Official developer certification issued in partnership with Microsoft, validating core competencies in C#.

Google Cloud Skill Badges: Cloud Engineering & Security

Google Skills

Practical hands-on credentials verifying cloud infrastructure skills on GCP.

AWS Certified AI Practitioner (AIF-C01) - 2026

Udemy

In-depth technical training covering fundamental Machine Learning concepts, scalable cloud services on Amazon Web Services.

Ruta de Vue.js

Codigo Facilito

Comprehensive 9-week intensive specialization covering reactive frontend engineering with Vue 3, Nuxt, component-driven UI architecture.

Arquitectura Software Moderna: DDD, Eventos, Microservicios

Udemy

Advanced software engineering course focused on Domain-Driven Design (DDD), event-driven architectures.
